

**CLAIMS**

**What is claimed is:**

1. A method of arranging grammar files in a presentation list, comprising the steps of:  
receiving a system request to display the grammar files in the presentation list;  
and  
sorting the grammar files by giving user defined grammar files greater priority over built-in grammar files and then sorting by a second criteria.
2. The method of claim 1, wherein the method further comprises the step of displaying the grammar files when a user selects the grammar files.
3. The method of claim 1, wherein the method further comprises the step of distinguishing between a user defined grammar and a built-in grammar.
4. The method of claim 3, wherein the step of distinguishing is accomplished using at least one among labeling and text formatting.
5. The method of claim 3, wherein the user defined grammar files and the built-in grammar files can share the same name.
6. The method of claim 1, wherein the second criteria is an alphabetical order.
7. The method of claim 1, wherein the second criteria is a chronological order.
8. A system for arranging grammar files in a presentation list comprises:  
a memory; and  
a processor programmed to receive a system request to display the grammar files from the memory in the presentation list and to sort the grammar files by giving user defined grammar files greater priority over built-in grammar files and then sorting by a second criteria.

9. The system of claim 8, wherein the processor is further programmed to display the grammar files when a user selects the grammar files.
10. The system of claim 8, wherein the processor is further programmed to distinguish between a user defined grammar and a built-in grammar.
11. The system of claim 10, wherein the processor is further programmed to distinguish by using at least one among labeling and text formatting.
12. The system of claim 10, wherein the user defined grammar files and the built-in grammar files can share the same name.
13. The system of claim 8, wherein the second criteria is an alphabetical order.
14. The system of claim 8, wherein the second criteria is a chronological order.
15. The system of claim 8, wherein the presentation list is at least one among a drop-down list and a list box.
16. A machine-readable storage, having stored thereon a computer program having a plurality of code sections executable by a machine for causing the machine to optimally arrange grammar files in a presentation list, comprising the steps of:
  - receiving a system request to display the grammar files in the presentation list;
  - and
  - sorting the grammar files by giving user defined grammar files greater priority over built-in grammar files and then sorting by a second criteria.

17. The machine-readable storage of claim 16, wherein the machine-readable storage is further programmed to sort by the second criteria being an alphabetical order.

18. The machine-readable storage of claim 16, wherein the machine-readable storage is further programmed to sort by the second criteria being a chronological order.
